CLAIMS

1. A lactic acid-based resin composition comprising a lactic acid-based resin (component (A)), and an ethylene-unsaturated carboxylic acid copolymer (component (B)) and/or an ethylene-unsaturated carboxylic acid copolymer ionomer (component (C)).

5

20

- A molding formed of the lactic acid-based composition according to claim 1.
- A single-layer film formed of the lactic acid-based
 resin composition according to claim 1.
 - 4. A laminate containing a layer formed of the lactic acid-based resin composition according to claim 1.
- A paper laminate containing a layer formed of the lactic acid-based resin composition according to claim 1 and
 a paper layer.
 - 6. A method for producing paper laminates comprising mixing a lactic acid-based resin (component (A)) with an ethylene-unsaturated carboxylic acid copolymer (component (B)) and/or an ethylene-unsaturated carboxylic acid copolymer ionomer (component (C)), and followed by melt-extruding the resulting lactic acid-based resin composition onto a paper layer to produce a paper laminate that comprises the resin layer and the paper layer.
